

LABORATORY RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1

Student Name: A.Rohit

Roll No.: A24126552067

Date: 31-08-2026

1. TITLE

Design and Implementation of College Information Portal Using HTML5

2. AIM

To develop a structured, semantic HTML5 web page for the ANITS College Information Portal that incorporates text formatting, department lists, student detail tables, interactive registration forms, and multimedia audio/video players.

3. OBJECTIVE

The objectives of this experiment are:

- To understand core HTML5 semantic tags and document layout structure.
 - To implement formatted text, mathematical/chemical formulas using sup and sub tags.
 - To create structured tabular data using table, tr, th, and td elements.
 - To design an interactive student registration form with various HTML5 input types.
 - To embed and control multimedia audio and video players.
-

4. THEORY

HTML5 is the standard markup language for creating modern web pages. It introduces semantic elements such as <header>, <nav>, <section>, <article>, and <footer> to structure content meaningfully.

Forms in HTML5 provide rich input controls including text, email, password, radio buttons, checkboxes, dropdown select, color pickers, and date pickers for client-side data capture.

HTML5 also provides native <audio> and <video> elements with browser controls for seamless media playback without third-party plugins.

5. ALGORITHM / PROCEDURE

1. Create an HTML5 document and configure the title as 'College Information Portal'.
 2. Add a header section with institution title and introductory description.
 3. Create a navigation bar with hyperlink anchors to sections and external portals.
 4. Format about text using bold, italic, underline, superscript, and subscript tags.
 5. Create ordered list for departments and unordered list for campus facilities.
 6. Construct a student details table with borders, column headers, and records.
 7. Build a comprehensive student registration form with text, email, password, branch select, date, color, and range inputs.
 8. Embed audio and video tags with controls attribute.
 9. Open in web browser and verify all elements and form controls.
-

6. PROGRAM

Source File: task1.html

```

<!DOCTYPE html>
<html lang="en">
<!-- head is for the head of the html-->
<head>
  <meta charset="UTF-8">

```

7. CODE EXPLANATION

Code / Syntax	Explanation
<header>, <nav>, <footer>	Semantic HTML5 layout container elements.
<sup>, <sub>	Displays text as superscript (X²) or subscript (H₂O).
, ,	Creates ordered (numbered) and unordered (bulleted) lists.
<table>, <tr>, <th>, <td>	Structures tabular data into rows, header cells, and standard data cells.
<input type='radio'>	Radio button group allowing only one gender selection.
<select>, <option>	Drop-down select menu for branch selection.
<audio controls>, <video controls>	Native media playback controls for audio and video files.

8. TEST CASES AND EXECUTION DATA

The experiment was executed with the following test cases to verify functionality:

Test Case	Input / Action	Expected Result	Actual Result	Status
TC-01	Page Load	Open index.html in browser	Header, nav, and sections render cleanly	Pass
TC-02	Lists & Formulas	Verify lists and formulas	Ordered/unordered lists display properly	Pass
TC-03	Table Rendering	Check student details table	Table renders columns with row borders	Pass
TC-04	Form Inputs	Fill form & click Submit	Inputs accept data, radio selection works	Pass
TC-05	Media Playback	Click play on audio/video	Media plays with default browser controls	Pass

9. OUTPUT

Output 1

[ANITS Website](#)
[Google Search](#)

ANITS College Information Portal

About Our College

Welcome to ANITS. We focus on *excellence* in education.
here we can learn everything about studys and create new things new formulas like $E = mc^2$ and also formulas Chemical Formula: H_2O

Programs and Facilities

Here are the top programs we offer (Ordered List):

1. **Computer Science Engineering**
2. **Information Technology**
3. **Electronics and Communication**

And our facilities (Unordered List):

- **Library**

10. RESULT

Thus, the College Information Portal was successfully implemented using HTML5, incorporating text formatting, lists, tables, registration form inputs, and multimedia elements, and verified across all test cases.
