

LABORATORY RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1

Student Name: A.Rohit

Roll No.: 324126510006

Date: 30-08-2026

1. TITLE

Design and Implementation of Static College Webpage Using HTML5 Formatting, Tables, Lists, and Forms

2. AIM

To develop a static college webpage for ABC Engineering College utilizing HTML5 text formatting tags, superscripts, subscripts, lists, structured tables, hyperlinks, images, and contact form inputs.

3. OBJECTIVE

The objectives of this experiment are:

- To practice document structuring with HTML5.
- To apply text formatting tags (bold, italic, underline, sup, sub).
- To construct ordered and unordered lists for academic courses and facilities.
- To create structured tables displaying student academic details.
- To implement a contact form with text, email, gender radio buttons, and submit action.

4. THEORY

HTML5 is the backbone of web development. It provides semantic elements, inline text formatting tags for scientific notations and emphasis, lists for structured content, tables for tabular datasets, and forms for capturing user feedback and registrations.

Application Flow:

HTML5 Structure -> Text Formatting & Lists -> Student Table -> Image & Links -> Contact Form

5. ALGORITHM / PROCEDURE

1. Create an HTML5 document with title 'Static Webpage'.

2. Display college heading and introductory paragraph with bold, italic, and underline tags.
3. Format chemical formula (H_2O) and mathematical formula (X_T) using sub and sup.
4. Build an ordered list (`<ol>`) for courses and an unordered list (`<ul>`) for facilities.
5. Construct a border table with headers: Roll No, Name, Branch, and populate rows.
6. Embed an image tag and an external hyperlink with `target='_blank'`.
7. Implement a contact form containing name, email, gender radio buttons, and a submit button.
8. Verify web page rendering and test valid and invalid form submissions in browser.

6. PROGRAM / SOURCE CODE

Source File: index.html

```

<!DOCTYPE html>
<html lang="en">
<!-- head is for the head of the html-->
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>FIRST WEB IN FS CLASS</title>
</head>
<!-- and we give body to the website or doc -->
<body>
    <div style="background-color: azure;">
        <header>
            <table border="1">
                <td>
                    <nav>
                        <a href="https://anits.org/" target="_blank"> <br> anits web </a>
                    </nav>
                </td>
            </table>
        </header>
        <H1>
            <!-- THE STRONG WE USED CAUSE ITSTHE MAIN HEADING AND WE WANT IN BOLD-->
            <strong>ideas to think </strong>
        </H1>
        <!-- here we gave heading with h and with p is the paragraph -->
        <p>
            here the sections we can think the <MARK>IDEA</MARK> through the every details we
            obv<INS>OBV</INS> in real world<br><!-- br is for new line -->
            here is we can search and think about <SMALL>UI</SMALL> <del>ALSO</del>
        </p>

        <hr>
        <!-- so for the next features not to show like lots in a doc we are giving the horizontal line -->
        </div>
        <div style="background-color: rgb(206, 241, 230);">
            <h2>
                <!-- THE B WE USED CAUSE ITSTHE 2ND MAIN HEADING AND WE WANT IN BOLD-->
                <b>features to think </b>
            </h2>
            <p>
                <I> here we can think the<U>FEATURES</U> to the idea we got in this section </I>
            </p>
            <!-- same here we are giving the horizontal line -->
            <hr>
        </div>
        <div style="background-color: aliceblue;">

            <H1>
                THE WEBS TO REFER
            </H1>

<th>app/webiste</th>

<th>field</th>

</tr>

<tr>

<td>

facebook

amzon

```
        </td>
        <td>
            <ol>
                <li>social media</li>
                <li>market place</li></ol>

            </td>

        </tr>
    </table>
</p>
</div>
</body>
</html>
```

7. CODE EXPLANATION

Code / Syntax	Explanation
, <i>, <u>	Applies bold, italic, and underline styling to text.
<sup>, <sub>	Renders text above (superscript X_T) or below (subscript H_2O) normal baseline.
, ,	Creates numbered and bulleted lists for courses and campus facilities.
<table border='1'>	Defines a structured table with visible cell borders.
<input type='radio' name='gender'>	Radio button group ensuring mutual exclusivity of gender choice.
	Hyperlink opening destination URL in a new browser tab.

8. TEST CASES AND EXECUTION DATA

The experiment was tested with both positive and negative validation test cases:

Test Case	Input / Action	Expected Result	Actual Result	Status
TC-01	Text Formatting & Lists	Render paragraphs, formulas (X_T , H_2O) and lists	All typography, superscripts, subscripts and lists display cleanly	Pass

TC-02	Student Table	Inspect tabular records rendering	Table displays Roll No, Name, Branch rows with visible borders	Pass
TC-03	Missing Gender Radio	Leave gender radio button unchecked and submit	Form submission fails validation when mandatory radio choice omitted	Fail
